## TopResponse Threat Advisory

**Release Date:** October 19, 2010.

**Purpose:** The Top Layer TopResponse team is issuing an advisory, which provides information needed to provide protection for the Microsoft Internet Explorer Cross-Domain Information Disclosure Vulnerability (MS10-071,CVE-2010-3330).

**Top Layer Products:** IPS 5500 E-Series.

**Vulnerable Infrastructure:** Microsoft Internet Explorer v6, Microsoft Internet Explorer v7, Microsoft Internet Explorer v8.

**Alert Type:** Critical Vulnerability

**Risk Assessment:** Critical

**Threat Impact:** Remotely exploitable vulnerability that could allow an attacker to control vulnerable systems

**Advisory Impact:** Prevention

**Summary:** Microsoft Internet Explorer implements a number of Cascading Style Sheet (CSS) processing functions. The CSS processing functions contain a flaw. The reported vulnerability could allow an attacker to gain unauthorized access to content from different security domains by enticing a user to visit a specially crafted web site.

**Recommended Action:** Top Layer recommends the following actions:

### **IPS 5500 E-Series Users:**

Download and apply Protection Pack 2010-10-18-01 (or later) to put this new protection into place. This will put into place protection for the the Microsoft Internet Explorer Cross-Domain Information Disclosure Vulnerability that will be applied to the "Strict Client Protection" IPS Rule Set.

In order to take advantage of the protection provided in this Protection Pack, make sure the IPS rule tln-106336 is enabled in the IPS Rule Set used to inspect traffic to your web client infrastructure.

**Note:** IPS rule tln-106336 is currently enabled in the Strict IPS Rule Set because there is a potential for false positive events. Please monitor events after the rule is enabled to provide protection for this vulnerability.
