

## **Threat Update Service\* Advisory** **July 27, 2012**

**Purpose:** The Corero Security Active Response Team informs customers that existing IPS 5500 security features provide proactive protection against known attacks targeting the Apache Sling CopyFrom Infinite Loop Denial-of-Service Vulnerability.

**Issue:** The POST servlet in the org.apache.sling.servlets.post bundle does not properly process the @CopyFrom operation. This could allow an attacker to cause a denial of service on the victim's machine.

**Recommended Action:** Apply the specified protection pack (or any later one) and ensure the associated rule is used to inspect traffic to the affected product infrastructure.

<b>Issue Identifier</b>	CVE-2012-2138
<b>Vendor Advisory</b>	<a href="https://issues.apache.org/jira/browse/SLING-2517">https://issues.apache.org/jira/browse/SLING-2517</a>
<b>Risk Assessment</b>	Important Vulnerability
<b>Threat Impact</b>	Remotely exploitable vulnerability that could allow an attacker to cause a denial of service on an unprotected system.
<b>Affected Products</b>	Apache Sling Servlets Post 2.1.0 and prior
<b>Corero Products</b>	IPS 5500 4.X and later.
<b>Associated Rule</b>	tln-102030
<b>Associated Rule Set</b>	This rule is automatically enabled in the "Strict Server Protection" rule set.
