

## **Threat Update Service\* Advisory**

### **July 27, 2012**

**Purpose:** The Corero Security Active Response Team informs customers that existing IPS 5500 security features provide proactive protection against known attacks targeting the Microsoft IIS Multiple FTP Command Request Remote Denial-of-Service Vulnerability.

**Issue:** Microsoft IIS does not properly process multiple FTP commands sent in a certain order. This could allow an attacker to cause a denial of service on the victim's machine.

**Recommended Action:** Apply the specified protection pack (or any later one) and ensure the associated rule is used to inspect traffic to the affected product infrastructure.

<b>Issue Identifier</b>	BID: 54276
<b>Advisory</b>	<a href="http://www.securityfocus.com/bid/54276/info">http://www.securityfocus.com/bid/54276/info</a>
<b>Risk Assessment</b>	Important Vulnerability
<b>Threat Impact</b>	Remotely exploitable vulnerability that could allow an attacker to cause a denial of service on an unprotected system.
<b>Affected Products</b>	Microsoft IIS 7.5 Microsoft IIS 6.0
<b>Corero Products</b>	IPS 5500 4.X and later.
<b>Associated Rule</b>	tln-004003
<b>Associated Rule Set</b>	This rule is automatically enabled in the "Recommended Server Protection" and "Recommended Client Protection" rule sets.
