

Threat Update Service* Advisory

Protection Pack 2012-12-21-02 Released December 21, 2012

Purpose: The Corero Security Active Response Team has issued this Prevention Advisory to protect customers against known attacks targeting the Microsoft Office SharePoint Server Malformed Request Code Execution Vulnerability.

Issue: The Microsoft Document Conversions Launcher Service does not properly validate SOAP requests. This could allow a remote attacker to execute arbitrary code on the victim's machine via a specially crafted SOAP request. An attacker who successfully exploited this vulnerability could take complete control of an affected system.

Recommended Action: Apply the specified protection pack (or any later one) and ensure the associated rule is used to inspect traffic to the affected product infrastructure.
