CORERO [NETWORK SECURITY]

Unlock the Power of
Edge Mitigation

Maximize Your Existing Infrastructure for Smarter DDoS Protection

Service providers face growing pressure to deliver seamless connectivity while defending against increasingly sophisticated DDoS attacks. Traditional solutions often require costly hardware upgrades and complex deployments. Our edge mitigation solution changes the game. By leveraging your existing network infrastructure, we deliver real-time, automated protection—ensuring service availability without excessive costs or complexity.

Smarter DDoS Defense with Existing Investments

Unlike traditional approaches that demand costly rip-and-replace strategies, our edge mitigation solution enhances your current infrastructure, delivering advanced protection exactly where it's needed: at the network edge.

With our industry-leading technology, you can:

- **Optimize Existing Routers for DDoS Mitigation –** Integrates with Juniper Networks to transform deployed Juniper routers into intelligent DDoS mitigation platforms, blocking threats in real time before they impact critical services.
- **Extend Protection Across Multi-Vendor Environments –** Supports automated mitigation by issuing BGP FlowSpec commands to non-Juniper routers, ensuring comprehensive protection across diverse networks.
- **Reduce Latency and Preserve Bandwidth –** Blocks volumetric threats at the edge, preventing congestion and maintaining optimal network and service performance.

Flexible Deployment Options That Fit Your Business

Every service provider has unique operational and financial needs. Our flexible deployment models ensure you get the right fit:

On-Premises, Self-Managed Solutions:
Gain full control with seamless integration into your environment, supported by automated detection and response.

Fully Managed DDoS Protection as a Service (DDPaaS)
Offload operational complexity with 24/7 monitoring, expert-driven response, and continuous optimization.

OPEX-Friendly Subscription Model
Avoid large capital expenditures with a scalable, subscription-based model that adapts to evolving threats.

Future-Proof Your DDoS Protection

Cyber threats are evolving. Your defenses should, too. Our edge mitigation solution empowers service providers to secure their networks, minimize downtime, and protect customer experiences—all without expensive hardware overhauls or added complexity.

Our solution keeps you ahead of threats by offering seamless Juniper integration, multi-vendor BGP FlowSpec enforcement, and a fully managed protection service.

Contact us today to strengthen your DDoS defense strategy.
